## TECHNICAL NOTES

This publication has been prepared to meet the numerous employer requests for population and labor force data by sex, race, and ethnic group for the state, metropolitan statistical areas (MSAs), and individual parishes. Tables included meet the basic requirements of 41 CFR Part 60-2, Subpart B, (Purpose and Contents of Affirmative Action Programs).

### **Population (pages 1 – 6):**

The latest census estimates are used to provide race and sex demographics of the population of the state and each parish. The 2010 census ratios are incorporated in all population tables beginning with this year's publication. Between each ten-year census period the Louisiana Workforce Commission receives annual population estimates for the state and parishes from the U.S. Census Bureau using the latest five years of the ACS (American Community Surveys). Annual population estimates are used for the total population, while the 2010 decennial census population updated the ratios for race and sex and then were applied to the 2011 annual population figures to produce annualized estimates by race and by sex.

### **Labor Force (pages 7 – 24):**

Data were derived from the monthly Current Population Survey (CPS) conducted of approximately 60,000 households across the United States. The U.S. Census Bureau conducts this survey for the Bureau of Labor Statistics (BLS). The Local Area Unemployment Statistics (LAUS) program is a Federal – State cooperative endeavor that provides monthly and annual labor force, employed, and unemployed data at the state, Metropolitan Statistical Area (MSA), and parish levels by place of residence. The CPS sample size for Louisiana is between 600 and 700 households because of the population losses from Hurricanes Katrina and Rita. With a sample this small we are unable to produce data by race or by sex for the labor force on a monthly basis. We must use the same methodology stated above for estimating the race and sex of the population (using the latest census ratios applied to the annual average labor force for the state and each parish). Because of the small sample size data users are cautioned when using labor force figures as a sole economic indicator of an area.

The **labor force** figures represent individuals 16 and over who were either working or actively looking for work during the reference week (the 12th of the month) of the survey.

**Employed** refers to those individuals 16 and over, who reported that they were working during the reference week of the 12th of the month.

Estimated **unemployed** are derived from those individuals 16 plus years, who responded that they were not working but were actively looking for work during the reference week of the 12th of the month.

**To compute the estimated employed for an area, subtract the number of unemployed from the civilian labor force figure. To compute the unemployment rate for an area for males or females on pages 17 through 24 divide the number of unemployed by the civilian labor force estimate, then multiply by 100.**

$$\text{Number Unemployed/Total Civilian Labor Force} * 100 = \text{Percent Unemployed}$$

## **Occupational Breakout of Civilian Labor Force by Sex and Ethnic Group (pages 25 - 97):**

Detailed statistics on the breakout of the labor force by occupation, sex, and race are also a ten-year census product. Census ratios were used to calculate the number of persons by occupation, sex, and race in the labor force for each parish, Metropolitan Statistical Area (MSA) and statewide. The latest available annual average labor force estimate for each area was then multiplied by the census ratio. We have incorporated the 2000 Census data by occupation with this 2012 publication. The census data was obtained by a special request to the U.S. Census Bureau, who in turn had to get approval from their Disclosure Review Board (DRB) to release data at the level of specificity that we requested. As you will note, because of more stringent confidentiality standards, many parishes have zero instead of the labor force figures by race and sex due to the DRB mandate that there be at least a weighted sample of 50 in each category of an occupation before it can be published. This also explained the difference between the figures for the civilian labor force 2010 annual average and the total civilian labor force by occupation. Since these data were compiled using ratios some totals by occupation do not sum because of rounding. The Bureau of Labor Statistics established the occupational classifications used in the SOC (Standard Occupational Classification) coding system.

## **Unemployment Insurance (UI) Claimant Characteristics:**

Data for this section were compiled from the monthly Unemployment Insurance (UI) Claimant Characteristics ETA 203 report. It details sex, race, age, ethnicity, industry, and occupational data for claimants filing UI claims for continued weeks of unemployment benefits during the week of the 19<sup>th</sup> of the month. Statewide totals are aggregated to represent the total population, therefore, data for the Regional Labor Market Areas (RLMAs) will not sum to the statewide level.
